### SUMMARY OF FINDINGS

### Seasonally adjusted

The number of **employed persons** in NSW in August 1991 was 2,611,700, a 1.8 per cent increase from July and a slight decrease (0.7 per cent) over the year.

The number of unemployed persons rose 43.3 per cent over the year, to 265,500 persons in August 1991. This was an increase of 18,200 persons (7.4 per cent) from the previous month.

The unemployment rate for NSW was 9.2 per cent in August 1991 compared to 6.6 per cent in August 1990. This was the highest unemployment rate since June 1984.

The female participation rate reached a survey high of 50.7 per cent in August 1991, while the male participation rate reached 73.4 per cent in July 1991, the second lowest level recorded and the lowest since March 1989.

	Labour f	orce

Annual change (a)	-0.7%	43.3%	2.6	0.4

(a) For rates, the annual change is expressed as the difference in percentage points.

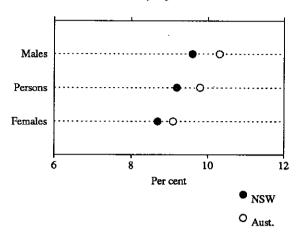

### Trend series

The number of **employed persons** in NSW continued to decrease, as it has from September 1990.

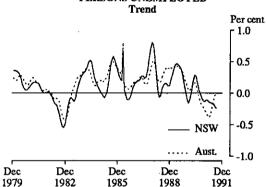

The unemployment rate continued to increase, as it has from December 1989.

The NSW participation rate has remained around 62 per cent, despite a slight decline over the year in the male participation rate.

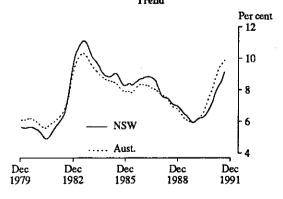

### UNEMPLOYMENT RATE, AUGUST 1991 Seasonally adjusted

### MONTHLY CHANGE IN NUMBER OF PERSONS UNEMPLOYED

#### UNEMPLOYMENT RATE Trend

Source: The Labour Force Australia (6203.0)

### Regions of NSW

• Estimates for regions of the State are subject to high sampling variability. Caution should be used when analysing these estimates and their movements. See Technical Note, page 34.

### Syaney

The unemployment rate for Sydney (MSR) was 8.5 per cent in August 1991.

The highest unemployment rate was 15.7 per cent in Fair-field-Liverpool. The second highest was 13.1 per cent in Canterbury-Bankstown.

The only regions in NSW with unemployment rates under 5 per cent were *Hornsby-Ku-ring-gai* (3.5 per cent), *Lower Northern Sydney* and *Manly-Warringah* (both 4.9 per cent).

Hornsby-Ku-ring-gai had the biggest increase in the number of persons employed, with an increase of 19.0 per cent over the year. The participation rate for the region increased to 65.9 per cent in August 1991 from 59.8 per cent in August 1990. Eastern Suburbs experienced a 7.3 per cent increase over the year in the number of persons employed, although this region's participation rate was constant at 62.4 per cent.

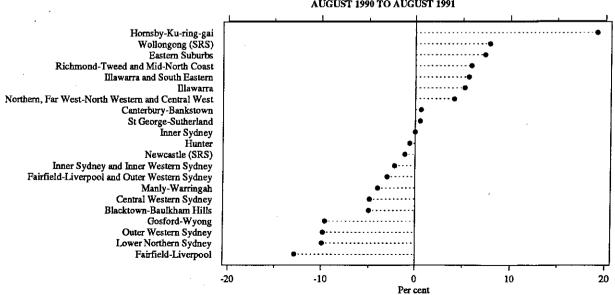

### Balance of NSW

The unemployment rate for Balance of NSW (MSR) was 9.9 per cent in August 1991.

The highest unemployment rate was 13.4 per cent in Richmond-Tweed and Mid-North Coast with Wollongong (SRS) the next highest at 11.8 per cent.

The lowest unemployment rates were 6.4 per cent in Murray-Murrumbidgee and 8.3 per cent in Northern, Far West-North Western and Central West.

### Youths (persons aged 15-24)

In NSW, the youth unemployment rate was 16.5 per cent in August 1991, up from 11.6 per cent in August 1990. The number of youths employed fell by 28,100 over the year, with most of this decrease (26,100) in Sydney (MSR).

In Sydney (MSR), the youth unemployment rate was 14.3 per cent in August 1991, up from 9.3 per cent in August 1990. Fairfield-Liverpool had the highest youth unemployment rate of 24.7 per cent. Canterbury-Bankstown had the next highest youth unemployment rate of 21.0 per cent.

The youth unemployment rate for Balance of NSW (MSR) was 20.2 per cent. All coastal regions experienced youth unemployment rates above 20 per cent, with Wollongong (SRS) the highest at 25.5 per cent.

### NOTE

This publication contains estimates of the civilian labour force in NSW derived from the labour force survey component of the monthly population survey, which is conducted on a sample basis throughout Australia.

Explanatory notes for the data contained within this publication can be found on page 32.

This issue of the publication incorporates some changes, to enhance its statistical value. These comprise-

- A reorganisation of the structure of the publication to provide a better *Summary of Findings* and enhanced readability. Because of this, some tables have been re-ordered.
- A new table, Table 20. Industry and occupation, Sydney (MSR) and Balance of NSW (MSR). (For interested readers, this data is available on quarterly microfiche for these and all other regions.)
- The inclusion of estimates of the civilian population aged 15 and over in *Table 18. Labour force status*, regions of NSW. This is consistent with labour force status published in other tables.
- A change in the name only of the published region formerly described as Northern, North Western and Central West (SRs). It is now, more correctly, described as Northern, Far West-North Western and Central West (SRs) and footnoted to indicate that (as before) this labour force region does not include the components of Far West Statistical Division. As previously, the components are included in statistics for Balance of NSW (MSR) and NSW. This description is consistent with the Australian Standard Geographical Classification (ASGC) Statistical Region Structure, on which the regions used in ABS household surveys statistics are based.

I hope that you will find these changes beneficial.

JOHN WILSON Deputy Commonwealth Statistician

### LABOUR FORCE PROJECTIONS

A new publication contains the first labour force projections produced by the ABS.

### Publication features-

- Projected labour force participation rates and alternative projections of the labour force for Australia, by age and sex, from 1992 to 2005
- Calendar year annual average series by age and sex for labour force and participation rates, from 1978 to 1990
- Detailed notes on the methodology used to derive the projections and background to the underlying assumptions.

### More information-

For more information about this topic, and how you can obtain this time series data on floppy disk, contact Jeffrey Middleton on (02) 268 4212, fax (02) 264 3425.

The publication-

Labour Force Projections, Australia, 1992 – 2005

(Cat. no. 6260.0, \$15.00)

is available from any ABS Bookshop. Please see back cover for telephone numbers.

### POPULATION PROJECTIONS

Another ABS publication contains associated population projections.

### Publication features-

This publication shows projections of population by age and sex for Australia, States and Territories. It includes several projections, as well as detailed notes on the methodology used to derive the projections and background to the underlying assumptions.

### More information-

For more information about this topic, and how you can obtain this, and more detailed unpublished, time series data on floppy disk, contact Neville Cowley on (02) 268 4414, fax (02) 264 3425.

The publication-

Projections of the Populations of Australia, States and Territories, 1989 to 2031 (Cat. no. 3222.0, \$25.00)

is available from any ABS Bookshop. Please see back cover for telephone numbers.

Recent releases from ABS Labour force supplementary surveys are detailed on page 31.

### EXPLANATORY NOTES

The February 1988 issue of this publication contains a more detailed description of the survey and the definitions used. That issue also includes a comprehensive technical note on data reliability.

### Introduction

This publication contains estimates of the civilian labour force derived from the labour force survey component of the monthly population survey, which is conducted on a sample basis throughout Australia.

### The population survey

2. This survey consists of the labour force survey and, in most months, one or more supplementary topics. The survey is based on a multi-stage area sample of private dwellings (houses, flats, etc.) and non-private dwellings (hotels, motels, etc.) and covers slightly less than one-half of one per cent of the population of New South Wales. The information is obtained from the occupants of selected dwellings by carefully chosen and specially trained interviewers. The interviews are generally conducted during the two weeks beginning on the Monday between the 6th and 12th of each month. The information obtained relates to the week before the interview (i.e. the reference week).

### Scope

- 3. The labour force survey includes all persons aged 15 and over, except:
  - (a) members of the permanent defence forces;
  - (b) certain diplomatic personnel of overseas governments, customarily excluded from census and estimated populations;
  - (c) overseas residents in Australia; and
  - (d) members of non-Australian defence forces (and their dependants) stationed in Australia.

### **Definitions**

- 4. The labour force category to which a person is assigned depends on the actual activity undertaken during the reference week (i.e. whether working, looking for work, etc.). The following definitions, which conform closely to the international standard definitions specified by the International Labour Office (ILO), relate only to those persons within the scope of the survey.
- 5. Employed persons comprise all civilians aged 15 and over who, during the reference week:
  - (a) worked for one hour or more for pay, profit, commission or payment in kind (including employees, employers and self-employed persons) in a job or business, or on a farm; or
  - (b) worked for one hour or more without pay in a family business or on a farm (i.e. unpaid family helpers); or

- (c) were employees who had a job but were not at work and were: on paid leave; on leave without pay for less than four weeks up to the end of the reference week; stood down without pay because of bad weather or plant breakdown at their place of employment for less than four weeks up to the end of the reference week; on strike or locked out; on workers' compensation and expected to be returning to their job; or receiving wages or salary while undertaking full-time study; or
- (d) were employers, self-employed persons or unpaid family helpers who had a job, business or farm, but were not at work,
- 6. Prior to April 1986, unpaid family helpers who worked for 1 to 14 hours were excluded from the category of employed persons.
- Employed persons can be classified into:
  - (a) full-time workers (i.e. those who usually worked 35 hours or more a week (in all jobs) and others who, although usually part-time workers, worked 35 hours or more during the reference week); and
  - (b) part-time workers (i.e. those who usually worked less than 35 hours a week and who did so during the reference week).
- 8. Unemployed persons are all those aged 15 and over who were not employed during the reference week, and:
  - (a) had actively looked for full-time or part-time work at any time in the four weeks up to the end of the reference week, and:
    - (i) were available for work in the reference week, or would have been available except for temporary illness (i.e. lasting for less than four weeks to the end of the reference week); or
    - (ii) were waiting to start a new job within four weeks from the end of the reference week and would have started in the reference week if the job had been available then; or
  - (b) were waiting to be called back to a full-time or part-time job from which they had been stood down without pay for less than four weeks up to the end of the reference week (including the whole of the reference week) for reasons other than bad weather or plant breakdown.
- 9. Actively looking for work includes writing, telephoning or applying in person to an employer for work; answering a newspaper advertisement for a job; checking factory or Commonwealth Employment Service notice-

boards; being registered with the Commonwealth Employment Service; checking or registering with any other employment agency; advertising or tendering for work; and contacting friends or relatives.

- 10. The *unemployment rate* for any group is the number unemployed expressed as a percentage of the labour force (i.e. employed plus unemployed) in the same group.
- 11. The *labour force* comprises all persons who, during the reference week, were employed or unemployed as defined above.
- 12. Persons not in the labour force are those who, during the reference week, were not in the categories employed or unemployed as defined above.
- 13. The *labour force participation rate* for any group is the labour force expressed as a percentage of the civilian population aged 15 and over in the same group.
- 14. Duration of unemployment is the period from the time the person began looking for work or was stood down to the end of the reference week.
- 15. Unemployed persons classified by industry and occupation. Unemployed persons who had worked full-time for two weeks or more in the last two years are classified according to the industry and occupation of their most recent full-time job.
- 16. Marital status. In the labour force survey, persons are classified as married or not married. Persons are classified as married if they are reported as being married (including de facto) and their spouse was a usual resident of the household at the time of the survey.
- 17. Persons attending school or a tertiary educational institution. Persons attending school comprise those aged 15 to 19 who, during the reference week, were enrolled full-time at secondary or high schools (including boarding school pupils). Persons attending a tertiary educational institution comprise those aged 15 to 24 who were enrolled full-time at universities, colleges of advanced education, technical colleges, colleges of technical and further education, and theological colleges.
- 18. Industry classification. The classification of industry is in accordance with the Australian Standard Industrial Classification (ASIC) described in Australian Standard Industrial Classification, Vol. 1 The Classification (1201.0).
- 19. Occupation classification. Occupation data are presented in accordance with the Australian Standard Classification of Occupations (ASCO) (1221.0 and 1222.0).

### Statistical areas of New South Wales

20. The regional structure used in tables 16 to 21 is based on the Statistical Region structure of the Australian Standard Geographical Classification (ASGC). For further information concerning statistical areas, please refer to

pages 38-40 and the publications Regional Statistics, New South Wales (1304.1) and Australian Standard Geographical Classification (1216.0).

### Seasonal adjustment and trend estimation

- 21. Seasonally adjusted and trend estimation series are included in this publication in Table 2. Seasonal adjustment is a means of removing the estimated effects of normal seasonal variation from the series so that the effects of other influences on the series can be more clearly recognised. Seasonal adjustment does not remove the irregular or non-seasonal influences which may be present in any particular month. Influences that are volatile can still make it difficult to interpret the movement of the series even after adjustment for seasonal variation.
- 22. Smoothing seasonally adjusted series produces a measure of the underlying trend by reducing the impact of the irregular component of the series. The trend estimates are derived by applying a 13-term Henderson-weighted moving average to the respective seasonally adjusted series. While this smoothing technique enables estimates to be produced which include the latest month, it does result in revisions to the most recent months as additional observations become available.

### Reliability of the estimates

23. Estimates in this publication are subject to sampling and *non-sampling* errors. The Technical Note on pages 34–37 of this publication gives information on these sources of error.

### Related publications

24. Users may also wish to refer to the following related publications which are available from the ABS Bookshop:

#### Additional data

- 25. In addition to the labour force survey, the ABS publishes a wide range of supplementary labour market information. For details see page 31 of this publication.
- 26. The ABS can also make available information which is not published. This information may be made available in one or more of the following forms: microfiche, photocopy, data tape, floppy disk, computer printout, clerically-extracted tabulation. In general, a charge is made for providing unpublished information.

### TECHNICAL NOTE ON DATA RELIABILITY

### Sources of error

There are a number of possible sources of error in sample surveys and these can be classified into two types: sampling error; and non-sampling error.

### Non-sampling errors

- 2. Non-sampling errors may arise as a result of errors in the reporting, recording or processing of the data and can occur even if there is a complete enumeration of the population. Non-sampling errors can be introduced through: inadequacies in the questionnaire; non-response; inaccurate reporting by respondents; errors in the application of survey procedures; incorrect recording of answers; and errors in data entry and processing.
- 3. It is difficult to measure the size of the non-sampling errors and the extent of these errors could vary considerably in significance from survey to survey, and from question to question. However, every effort is made in the design of the survey and development of survey procedures to minimise the effect of these errors.

### Sampling errors

4. Sampling error is the error which occurs by chance because the data were only obtained from a sample, not the entire population.

### Standard error of estimates

5. One measure of the variability of estimates which occurs as a result of surveying only a sample of the population is the *standard error* (SE). There are about two chances in three that a survey estimate is within one standard error of the figure that would have been obtained if all persons had been included and about nineteen chances in twenty that it is within two standard errors. That is, there are 19 chances in 20 that the true estimate is in the range —

$$X - 2 \times SE(X)$$
 to  $X + 2 \times SE(X)$ 

(where X is the estimate)

The standard error of an estimate can be obtained from Table A. Linear interpolation should be used to calculate the standard error of estimates falling between the sizes of estimates listed in the table (see example below Table A).

6. In the tables in this publication, only estimates with relative standard errors of 25 per cent or less, and percentages based on such estimates, are considered sufficiently reliable for most purposes. However, estimates and percentages with larger relative standard errors have been included and are preceded by an asterisk (e.g. \*3.4) to indicate they are subject to high standard errors and should be used with caution.

### Relative standard errors

7. The standard error can also be expressed as a percentage of the estimate and this is known as the *relative* standard error (RSE). The RSE is determined by dividing the standard error of an estimate SE(X) by the estimate X and expressing it as a percentage. That is,

$$RSE(X) = \frac{SE(X) \times 100}{X}$$

(where X is the estimate)

8. The look up list on the following page provides a guide for the calculation of standard errors and relative standard errors for a range of statistics.

### METHODS FOR CALCULATING THE STANDARD ERRORS FOR SELECTED ESTIMATES

Measure of reliability to be determined	Method
Standard errors of estimates of employed persons.	Determine the SE from Table A directly.
Standard errors of estimates of unemployed persons.	Multiply the SE from Table A by 1.06.
Standard errors of estimates of persons not in the lab- our force.	Multiply the SE from Table A by 1.1.
Standard errors of rates (eg the unemployment rate which is based on the number of unemployed persons expressed as a percentage of the number of persons in the labour force).	Determine the RSE of the numerator (X) and the denominator (Y) then apply the following formula.  RSE $(X/Y) = \sqrt{[RSE(X)]^2 - [RSE(Y)]^2}$
Standard error of average duration of unemployment.	Determine the RSE for the number of persons on which the average is based and multiply this by 1.3.
Standard error of median duration of unemployment.	Determine the RSE for the number of persons on which the average is based and multiply this by 2.0.
Standard error of monthly movements.	Using Table B, look up the SE of the larger estimate.
Standard error of quarterly movements.	Determine the standard error of the larger estimate (using Table A) and multiply this by 1.22.
Standard error of annual movements.	Determine the standard error of the larger estimate (using Table A) and multiply this by 1.3.

### Linear interpolation

Linear interpolation is used to determine the standard error of an estimate which falls between two values listed in the *size of estimate* column in Tables A or B. Linear interpolation is best described using an example. In August 1991, there were 534,300  $(X_e)$  employed persons working part-time in New South Wales. This estimate falls between the values 500,000  $(X_l)$  and 1,000,000 $(X_u)$  in Table A.

2. The standard error of the estimate is determined as follows.

Firstly, calculate F = 
$$\frac{X_e - X_I}{X_u - X_I}$$
  
=  $\frac{534,300 - 500,000}{1,000,000 - 500,000}$   
= 0.07

3. Secondly, calculate the standard error of the estimate,  $SE(X_e)$  thus,

$$SE(X_e)$$
 =  $SE(X_l)$  + F x [ $SE(X_u)$  -  $SE(X_l)$ ]  
= 8,000 + 0.07 x [10,300 - 8,000]  
= 8,161  
= 8,200 rounding to the nearest 100

4. Therefore the standard error of the number of employed persons working part-time in New South Wales (534,300) is 8,200.
